HOW CANDLESTICK IS FORMED

- Candlesticks are created by up and down movements in the price. While these price movements sometimes appear random, they often form patterns traders use for analysis or trading purposes.
- Patterns are separated into two categories, bullish and bearish. Bullish patterns indicate that the price is likely to rise, while bearish patterns indicate that the price is likely to fall. No pattern works all the time, as candlestick patterns represent tendencies in price movement, not guarantees.

HOW LINE CHART IS FORMED

- A line graph connects individual data points that, typically, display quantitative values over a specified time interval.
- Line graphs consist of two axes: x-axis (horizontal) and y-axis (vertical), graphically denoted as (x,y).
- In investing, in the field of technical analysis, line graphs are quite informative in allowing the user to visualize trends.
- While line graphs are used across many different fields for different purposes, their most common function is to create a graphical depiction of changes in values over time.
- In finance, line graphs are used to create visual representations of values over time, including changes in the prices of securities.

ABOUT US

InVed (by Equity4Life IH Analytics Private Limited) is a SEBI registered Research Analyst (RN : INH000012351) firm based out of Jaipur.

We provide research/advisory services for short term trading as well as long term investing backed by a strong team of technical and fundamental experts.

InVed evolved by blending the Technical expertise of Equity4Life and Fundamental expertise of Investing Hut thereby giving wings to the Techno-Funda approach.

The company made a headway with like-minded people from diverse backgrounds with a mission to spread knowledge about investing through our research.

InVed is a combination of 2 words: “Investing” & “Veda” thereby depicting investing with knowledge and proper research.
